Asset Number: 006771

Model: KURF18-3-N

Serial: H2KURF18KZ005

Unit Type: Three Door Underbench Dual Temp

Location: kitchen

Task: 3 Door Dual Temp Refrigeration unit tripping the power

Job Summary:

- To site, speak with onsite representatives with regards to dual temp unit tripping power.
- on arrival unit is on and cooling.
- Site representative informed me that it isnt tripping constantly, however randomly every other hour.
- Check workings. All evap fans, condenser fan and compressor working, self cleaning condenser working.
- isolate and carry out insulation resistance testing, unit has passed test.
- Check power outlets.
- Find LH side socket action isnt gripping the plug top fully and is loose, found sometimes unit not receiving power from this outlet.
- Fit into RH socket outlet, this action is gripping the plug top firmly.
- run test unit in defrost, all ok.
- Show on site representative and inform him that it is most likely that the GPO is causing his power trips for this circuit. Show him the loose GPO with the plug top in.
- Informed staff not to block condenser vent outlets with boxes as this will compromise the units capabilities of displacing heat.
- unit working as expected,
- Reassemble unit and gain signature
